Data in Many Forms..

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8200, 990-8203) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montreal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Toll free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional references centres.

Newfoundland and Labrador	Zenith 0-7037
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192
Quebec	1-800-361-2831
Ontario	1-800-268-1151
Manitoba	1-800-282-8006
Saskatchewan	1(112)800-667-3524
Alberta	1-800-222-6400
British Columbia (South and Central)	112-800-663-1551
Yukon and Northern B.C. (area served by NorthwesTel Inc.)	Zenith 0-8913
Northwest Territories (area served by NorthwesTel Inc.)	Zenith 2-2015

How to Order Publications

This and other Statistics Canada publications may be purchased from local authorized agents and other community bookstores, through the local Statistics Canada offices, or by mail order to Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Main Base Series Directory, 1984 — $75.00 Canada, $90.00 other countries

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

CANSIM Mini Base Series Directory, Catalogue 12-569 — $45.00 Canada, $54.00 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — $7

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — $20

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

J.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
R.E. Drover — Director, Transportation Division
B.J. Lynch — Director General, Operations Branch
R. Platek — Director, Census and Household Survey Methods Division
J.G. Stinson — Director, CANSIM Operations Division
G.J. Brackstone — Director General, Methodology Branch
A. Meguerditchian — Director, International and Financial Economics Division
L.O. Stone — Director, Population Studies Division
P.N. Triandafillou — Director, Agriculture/Natural Resources Division
K. Lal — Director General, System of National Accounts Branch
D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada. R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Please refer to OBSERVATIONS regarding the changes made to this issue.

Monthly or quarterly data may not add to totals due to rounding.

Observations

Section 3 — Table 2.2/continued: Domestic Product by Industry of Origin, Monthly Volume Indexes (1971=100)

As of this issue the series Knitting Mills (D144374, D144202) and Clothing Industries (D144375, D144203) have been terminated and are now grouped into one series — Knitting and Clothing Industries (D144572, D144571).

Section 4 — Table 6: Unemployment Insurance Statistics

Please note that the series reported under "Claims Data" and "Type of Benefits Paid" carry new CANSIM identifiers.

Section 6, Table 5: Estimated Value of Inventories Owned and Raw Materials in Manufacturing

This table has been re-structured. We have removed the secure series and have added information pertaining to Inventories Held; Durable Consumer Goods Industries (D316733, D316765), Intermediate Goods and Supplies (D316736, D316768) and Export Oriented Industries (D316737, D316769).

Section 6 — Table 11: Pulpwood, Wood Pulp and Newsprint

The series "Wood pulp exports" is now reported in thousands of metric tonnes. Please note that this series carries a new CANSIM identifier.

Imports and Exports:

Please note that the Imports and Exports series listed in the following Sections carry new CANSIM identifiers.

Section 6 — Table 13: New Motor Vehicles
Section 6, — Table 15: Refrigerators, Freezers, Washing Machines and Clothes Dryers
Section 7 — Table 7: Non-metallic Minerals

Section 7 — Table 6: Metals

The series "Exports of silver" (D2606) is now reported in thousands of metric tonnes. Please note that this series carries a new CANSIM identifier.

Section 9 — Table 4: Exports of Grains and Livestock Products

The series appearing under "Livestock Products" (D3024-D3029) are now reported in thousands of metric tonnes. Please note that these series carry new CANSIM identifiers. The series "Eggs in the Shell" (D3030) is now reported in thousands of dozens.

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. [2] Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3] Includes logging, fishing, trapping and hunting. [4] Includes mechanical and construction. [5] Includes a small number in non-specified occupations. [6] Beginning with 1978 includes fiancés and fiancées. [7] Does not include students entering Canada on students' visas. [8] Includes also retired persons, elderly dependents, and other unspecified persons.

Section 3 · System of National Accounts

1. Income and Expenditure Accounts

18 1.1 National Income and Gross National Product
18 1.2 Gross National Expenditure
19 1.3 Gross National Expenditure, Constant Dollars
19 1.4 Sources of Personal Income
20 1.5 Disposition of Personal Income
20 1.6 Sources and Disposition of Gross Saving
21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
25 1.8 Implicit Price Indexes, Gross National Expenditure
25 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

26 2.1 Gross Domestic Product by Industry of Origin, Quarterly
27 2.2 Gross Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

32 3.1 Canadian Balance of International Payments, Current Account, All Countries
33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

---

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9.

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

Table 1.9: Relation between gross national product at market prices and gross domestic product at factor cost (millions of dollars)

Year and quarter	Gross national product at market prices	Residual error of estimate	Indirect taxes less subsidies	Investment income received from non-residents	Investment income paid to non-residents	Gross domestic product at factor cost	Gross national product at market prices	Residual error of estimate	Indirect taxes less subsidies	Investment income received from non-residents	Investment income paid to non-residents	Gross domestic product at factor cost

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

[1] "Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months. [3] Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees on courses approved by Canada Employment and Immigration Commission.

[1] Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month.
[2] The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3] The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

[1] These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1982. [2] Includes water, fuel and electricity, and traveller accommodation. [3] Excludes water, fuel and electricity.

* "For further information on the weights and methodology associated with the Consumer Price Index, see "The Consumer Price Index Reference Paper, updating based on 1982 expenditures," cat. 62-553, occasional.

[1] Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2] Shipments of goods manufactured within the establishments. [3] Total new orders received during the period at estimated selling value, net of cancellations. [4] Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

---

[1] Estimates of manufacturers' shipments are based on a monthly survey of a sample of manufacturing establishments benchmarked to the annual Census of Manufactures.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 3: Manufacturing inventories[1] by industry based on the 1980 standard industrial classification (million dollars)

		Non-durable goods industries											
End of period and month	Total inventories owned	Total	Food	Beverage	Tobacco products	Rubber products	Plastics products	Leather and allied products	Primary textile	Textile products	Clothing	Paper and allied products	Printing publishing and allied

---

[1] Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1980 standard industrial classification (million dollars)

	Inventories owned				Inventories held: Total			Inventories held: raw materials						
	Consumer goods				Consumer goods			Consumer goods						
End of period and month	Non-durable and semi-durable	Capital goods	Construction materials and components	Supplementary classification: automotive products	Durable	Intermediate goods and supplies	Export-oriented industries	Non-durable and semi-durable	Durable	Capital goods	Construction materials and components	Intermediate goods and supplies	Export-oriented industries	Supplementary classification: automotive products

[1] Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export.

Sources: Pulpwood and Wood Residue Statistics (25-001), Exports by Commodities (65-004), Statistics Canada; Bulletins of the Canadian Pulp and Paper Association: "Monthly Pulp Summary" and "Monthly Newsprint Statistics".

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. [2] Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [3] Excluding shipments for re-processing at maker's own plant. [4] Data compiled as submitted by the steel producers according to the steel industry distribution code.

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric.

Note: Monthly data includes all producers of electric energy who generate 20 MW.h or more per year. The monthly data accounts for approximately 99% of all generation plus 100% of all imports and exports.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.
[1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste.

[1] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [3] Includes stove oil, kerosene. [4] Includes aviation gasoline and aviation turbo fuel. [5] Includes propane and propane mixes and butane and butane mixes. [6] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

[1] In 1979, approximately 2,000 municipalities are being surveyed.

[2] This is an historical series with data availabie back to 1920. Consistent coverage and volume have been maintained so historical comparisons are possible.

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note: Components may not add to totals due to rounding differences.

[1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property.

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision. [2] The major groups include additional components than the selected ones shown.

Section 11 · External Trade

1. Merchandise Trade on a Balance of Payments Basis

108 1.1 Total Exports by Major Trading Area and Section, Seasonally Adjusted, Balance of Payments Basis

1.2 Imports by Major Trading Area and Section, Seasonally Adjusted, Balance of Payments Basis

109 1.3 Price and Volume Indexes of Total Exports by Section, Seasonally Adjusted, Balance of Payments Basis

1.4 Price and Volume Indexes of Imports by Section, Seasonally Adjusted, Balance of Payments Basis

110 1.5 Total Exports by Commodity Grouping, Seasonally Adjusted, Balance of Payments Basis

112 1.6 Imports by Commodity Grouping, Seasonally Adjusted, Balance of Payments Basis

2. Merchandise Trade on a Customs Basis

114 2.1 Total Exports by Country, Not Seasonally Adjusted, Customs Basis

115 2.2 Imports by Country, Not Seasonally Adjusted, Customs Basis

116 2.3 Total Exports by Commodity Grouping, Not Seasonally Adjusted, Customs Basis

118 2.4 Imports by Commodity Grouping, Not Seasonally Adjusted, Customs Basis

[1] Total exports includes domestic exports and re-exports, for further information please refer to Summary of External Trade (65-001). [2] The figures reflect a number of adjustments applied to the customs totals to make them consistent with the concepts and definitions used in the system of national accounts. For more information about these adjustments, please refer to Quarterly Estimates of the Canadian Balance of International Payments (67-001). [3] For definition of major trading areas and sections, please refer to Summary of External Trade (65-001).

[1] Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled $500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] These series reflect the combination of two CANSIM series.

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

[1] This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time.

[2] Seasonally adjusted data for Saskatchewan is not available.

---

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. [4] Includes Petroleum and Gas Revenue tax. [5] Includes special excise tax on gasoline.

Data in Many Forms..

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Main Base Series Directory, 1984 — $75.00 Canada, $90.00 other countries

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

CANSIM Mini Base Series Directory, Catalogue 12-569 — $45.00 Canada, $54.00 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — $7

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — $20

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

J.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
R.E. Drover — Director, Transportation Division
B.J. Lynch — Director General, Operations Branch
R. Platek — Director, Census and Household Survey Methods Division
J.G. Stinson — Director, CANSIM Operations Division
G.J. Brackstone — Director General, Methodology Branch
A. Meguerditchian — Director, International and Financial Economics Division
L.O. Stone — Director, Population Studies Division
P.N. Triandafillou — Director, Agriculture/Natural Resources Division
K. Lal — Director General, System of National Accounts Branch
D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

CANADIAN DIRECT INVESTMENT POSITION ABROAD

Trends and Recent Developments

[*]C.F.J. RICHARDS

Synopsis

Until very recently, the Canadian direct investment position abroad was considered a dull subject. Its rate of growth was easily predictable. Its location followed established patterns. The industries which attracted it were also easily discernible. And only a handful of large Canadian enterprises accounted for close to 90% of the total Canadian direct investment abroad.

But then, over a period of five years beginning in 1977 and ending in 1981, Canadian direct investment abroad grew at an unprecedented rate. The United States became more important than before as a destination for those funds while the developing countries suffered a declining share. Although large enterprises were still significant investors, a number of medium and small-sized enterprises also became active investors.

Three groups of industries — namely Manufacturing, Petroleum and Natural Gas and Real Estate — were largely responsible for the huge growth. Moreover, more important than the growth of total direct investment, was the much greater growth of Canadian-controlled investment abroad. This was because both domestic and foreign indirect investment in Canadian subsidiaries abroad increased at a much faster rate than direct investment. The absolute dollar value of this third party investment also grew at a very high rate.

Since the beginning of 1982, however, the rate of growth of Canadian direct investment abroad has returned to the slower pre-1977 pace. Is this period one of consolidation necessary to digest the huge increase that occurred in the five-year period ended in 1981, or is it a return to a "normal" growth pattern?

The Historical Trend of Canadian Direct Investment Abroad

Statistics Canada began to record Canadian direct investment in 1926. Until the end of World War II, however, these statistics were collected and published for selected years only. Since 1945, they have been published annually.

In the twenty-year period following 1926, the stock of direct investment abroad doubled. Over the next thirty years, this rate of growth accelerated, and the stock doubled every eight years.

From the end of 1976 to year-end 1981, direct investment abroad almost tripled. Most of this growth occurred in only three years — from 1978 t 1980 — when investment in foreign countries doubled. During the next three years, to the end of 1983, the rate of growth slowed significantly. The stock increased by only 50%, and more than one-half of this growth occurred in the first year — 1981. Since the beginning of 1982, the investment pattern seems to have returned to that observed from 1946 to 1976 — that is, growth of about 9% annually.

---

[*] C.F.J. Richards is chief of the International Investment Position Section, Balance of Payments Sub-Division, Statistics Canada

It may be too early to say whether the rate of growth of direct investment abroad over the five years from 1977 to 1981 is an aberration or a fundamental change. Nearly two-thirds of the total increase in direct investment between 1926 and 1981 occurred during those final five years. It was, by any standard, a rate of growth which would be difficult to maintain.

The sudden deceleration of this growth rate in 1982 may have signalled a period of consolidation. The 1983 and 1984 statistics are estimates and the final numbers may show that these estimates are conservative. But it is certain that the rate of growth has decreased compared with the period 1977 to 1981.

1977 To 1981: Abnormal Growth or a New Investment Pattern?

The years 1977 to 1981 were a period of unprecedented rate of growth in Canadian direct investment abroad, and one that may not be experienced again. At the end of 1981, Canadian direct investment abroad was $32.5 billion. If the 1977-81 rate of growth were to continue over the next five years, Canadian direct investment abroad would reach about $100 billion at the end of 1986, perhaps surpassing foreign direct investment in Canada.

However, it is not likely that the rate of growth observed during 1982-84 will result in either of these events occurring in 1986. At the end of 1984, Canadian direct investment abroad totalled $41.4 billion, while foreign direct investment in Canada was $83.1 billion, up from $66.5 billion three years earlier.

The Role of Capital Flows and Other Factors

Earlier reference was made to the fact that about two-thirds of the increase in direct investment stock between 1926 and 1981 took place from 1977 to 1981. Capital flows had the sharpest impact on the stock. Of the $21.8 billion net capital outflows for direct investment between 1926 and 1981, the five years under review accounted for about $15.7 billion, or 72%. In 1981 alone, the capital outflow amounted to $6.9 billion.

The capital stock increased by $21.2 billion during 1977-81 and capital flows accounted for 74% of it. Another $4.9 billion, or 23%, represented the growth in retained earnings (see Statement 1). The balance of the increase was due to a number of factors: global changes in exchange rates had a positive effect on the value of the capital stock; differences between the market and the book values of assets sold or purchased, sometimes reduced, and at other times increased, the value of investments made abroad; and there were transactions for which high premiums over prevailing market prices were paid, as is usual in takeovers.

Statement 1. Components of the Increase in the Direct Investment Position Abroad, 1977-81

	$ billions	%
Net capital flows	15.7	74
Retained earnings	4.9	23
Other factors	0.6	3
Total	21.2	100

As can be seen above, the most important factor in the growth of direct investment abroad from 1977 to 1981 was capital flows.

Historically, retained earnings had contributed to about one-third of the growth of the direct investment stock. In view of the tremendous flows of capital during this period, it is not surprising that the relative position of retained earnings declined. In fact, it is surprising that it did not fall further. The explanation for this is basically that a huge amount of funds flowed out to acquire existing concerns, expecially in the United States. Capital was also invested in projects where the gestation period to profitability was relatively short, such as in real estate. If the capital had been devoted to start-up projects where the gestation period was much longer, the relative position of retained earnings would have been further reduced.

Direct Investment in the United States

Another important characteristic of Canadian direct investment abroad is that the United States is the major target for this investment. In the two decades following the Second World War, the United States was the pre-eminent destination of Canadian direct investments made in foreign countries. From the mid-1960s to mid-1970s, investment was distributed more evenly around the globe. But between 1977 and 1981, the United States regained its predominant position — its share of Canadian direct investment stock abroad rose from 53% to 66%.

A number of factors were responsible for this great surge of investment in the United States. Perhaps the most important reason was confidence in the American economy. Not only Canada but also other industrialized countries, such as Great Britain, West Germany, the Netherlands and Japan, were actively investing in the United States. The strong undercurrents of conservatism in the late seventies and early eighties may have created an even more attractive economic environment.

Certainly, the exchange rate for significant European direct investors' currencies was strong in comparison with the U.S. dollar. It is difficult to say to what extent this situation influenced direct investment activities. But it is equally difficult to think that such considerations would not have played a part in the various takeover activities during that period.

However, during the period 1977-81, Canadian currency declined in relation to the U.S. dollar. Perhaps Canadian investors expected the Canadian dollar to decline still further. Some borrowed their investment funds in the United States to avoid exchange rate risks; others borrowed European funds, anticipating a turnaround for the U.S. dollar. The relative importance of these various financing decisions can only be established by empirical studies. But the greater growth of controlled investment, in comparison with direct investment, suggests that there was more reliance on foreign funds for investment activities abroad. It is also likely that Canadian parent companies had borrowed a fair portion of the funds used for Canadian direct investment from foreign sources.

The late seventies were also a time of world-wide concern about inflation. There was a desire to hold real assets, irrespective of whether they were above or below ground, as effective hedges against inflation. Therefore, the assets of various United States corporations were attractive to foreign direct investors. Aside from the cost factor, it was quicker to acquire existing assets than to start from scratch.

In Canada, a number of enterprises had reached a certain stage of maturity. Many were considered among the best in the world in classes of industry such as real estate, telecommunications, publishing and certain consumer products. For such enterprises, the United States provided a more extensive market for expansion.

Direct Investment in Developing Countries

In terms of absolute growth, direct investment in the developing countries grew by nearly 80% — to $4.9 billion — between 1977 and 1981. But this growth rate was only about one-third of that in the developed countries.

In comparison with the United States, the developing countries suffered a relative decline in Canadian direct investment during the five-year period ending in 1981. Their share of such investment fell nine percentage points, to 15%. Most of this drop occurred in 1979 as the result of a substantial disinvestment in Brazil. But even without this disinvestment, a noticeable dent would have been made in the relative position of the developing countries.

Canadian direct investment in developing countries grew fastest in Asia. Indonesia remained the most prominent host for direct investment in this region.

The Commonwealth countries also increased their relative position in total investments in the developing nations during this five-year period. Historically, Commonwealth ties were influenced by common language, business practices and familiar legal systems. There was also the attraction of Commonwealth tariff preferences. All of these influences have been quite evident in the geographical dispersal of Canadian investments abroad.

Direct investment in the Francophone developing countries continued to be negligible.

Some caution should be used when interpreting the relative gains made by the Asian and the Commonwealth regions. First, these gains were greatly influenced by the large disinvestment in Brazil in 1979. Second, some of the direct investments made in countries, such as the Bahamas, Bermuda, the Netherlands Antilles and Panama, are of an intermediary nature and will eventually find their way to other countries. Where possible, we have traced such investments to their ultimate locations. It is not always possible, however, to reallocate such investments on the basis of the information presently available to us.

The Role of Medium-sized Enterprises[1] in Direct Investment Abroad

By size group, it was the medium-sized enterprises that played a key role in the tremendous increase of direct investment during the five-year period 1977-81. In this period enterprises with direct investments abroad worth at least $100 million increased their relative share of total investment in foreign countries. At the beginning of 1977, they accounted for 65% of such investment; by end of 1981, their proportion had risen to 77%. Combined with that increased relative share was a four-fold increase in the number of enterprises in the $100 million and over investment category. Out of the 50 new entrants into the large companies category by the end of 1981, 35 had been medium-sized companies five years previously.

---

[1] In this analysis, large enterprises are defined as those having over $100 million in direct investments abroad, medium-sized as those having between $10 million and $100 million, while small-sized enterprises have under $10 million.

At one time, Canadian direct investment abroad was not difficult to monitor since just a handful of enterprises accounted for most of the investment activity. For instance, about 16 enterprises contributed 65% of the total Canadian direct investment abroad at the beginning of 1977. This was not unlike the previous decade, when about 11 enterprises accounted for 68% of total direct investment. The number of enterprises with over $100 million invested abroad increased by five each in both 1977 and 1978, then by ten in 1979, 14 in 1980 and 16 in 1981. By the end of 1981, these enterprises numbered 66. This huge increase in the number of such enterprises did not greatly affect the size of the enterprises in this category; their average size declined from $466 million at the beginning of 1977 to $389 million at the end of 1981.

Of the 66 enterprises in the $100 million plus category that together constituted 77% of total Canadian direct investment abroad at the end of 1981, only 16 had already been large investors at the beginning of 1977. Another 35 had graduated from the medium-sized group of companies by 1981. Ten others had been small companies at the beginning of 1977. There were also five new investors who had not had any direct investments abroad prior to 1977.

Of the large companies at year-end 1981, the sixteen that were also large in 1976 had direct investment increases of $6.7 billion during the 1976-1981 period. However the 35 companies that were medium sized at the end of 1976 had a somewhat bigger increase of $7 billion. More strikingly the rate of increase of direct investment among the medium-sized companies was more pronounced. At the end of 1981, these companies accounted for 35% of the total direct investment position of all large companies. (See Statement 2). If this group of companies had not graduated into the large companies category by 1981, the relative position of the latter to total direct investment position would have been 50% instead of the actual 77%. The relative share of the 16 large enterprises that had constituted 65% of total direct investment at the beginning of 1977 had fallen to 44% at the end of 1981. Therefore by any yardstick, it was the medium-sized companies that figured prominently in the tremendous growth of direct investment in the 1976-81 period. In a comparison of this nature, the effects of inflation should be borne in mind. If $100 million was the cut-off point for medium-sized enterprises at the beginning of 1977, the appropriate level five years later should be higher at least by the rate of inflation. However, no such allowance for inflation has been made in this analysis.

The majority of the new entrants into the large-sized companies were in the Manufacturing, Petroleum and Natural Gas or Real Estate industries. (See Statements 3 and 4.)

Statement 2. Direct Investment Position of Large Companies of 1981, By Size Status of 1976

Size status as of 1976	Number	1976	1981	Change
		$ millions		
Large companies	16	7,450	14,197	6,747
Medium companies	35	1,657	8,693	7,036
Small companies	10	43	1,346	1,303
New companies	5	—	836	836
Total	66	9,150	25,072	15,922

Statement 3. Large Companies of 1981 by Size Status of 1976, by Industry

Industry	Size category as of the end of 1976			
	Large	Medium	Small	Total
Manufacturing	8	14	3	25
Petroleum and Natural Gas[2]	—	12	—	12
Real Estate and Other	8	9	7	24
All industries	16	35	10	61

Statement 4. Direct Investment Position. Year-end 1981, of New Entrants to the Large Company Category, from 1977 to Year-end 1981

Industry	Number	$ Billions
Manufacturing	18	5.3
Petroleum and Natural Gas[3]	12	3.3
Real Estate	6	0.9
Other	14	1.4
All industires	50	10.9

Statement 5. Relative Share of Large Companies to Total Direct Investment, Year-ends 1976 and 1981

	1976	1981
	%	%
Large companies	65	44
Medium companies in 1976	—	27
Small companies in 1976	—	4
New companies since 1976	—	2
Total	65	77

Shifts in the Industry Pattern of Direct Investment

The tremendous increase in Canadian direct investment position abroad from 1977 to 1981 was accompanied by changes in relative positions of various industries. For instance, Petroleum and Natural Gas increased its share of total direct investment by six percentage points, rising from 12% to 18%. The relative position of the Financial industry increased from 9% to 13%, due largely to the increase in real estate investments. The importance of the Utilities industry declined 9 percentage points, to 5%.

In spite of these changes in the relative positions of other industries, Manufacturing — the major industrial category — lost only a slight portion of its share. It declined by only one percentage point, to 47% of total direct investments abroad. The remaining industrial categories were unchanged: Mining and Smelting was steady at 10%, Merchandising remained at 4%, and All Other Industry was a stable 3%.

---

[2] Some of the large and small Petroleum and Natural Gas companies have been included with the Real Estate and Other industry category for confidentiality reasons.

---

[3] The number relating to the Petroleum and Natural Gas industry has been adjusted downwards for confidentiality reasons and has been included in the Other category.

Although the relative position of the Manufacturing industry was basically solid, there were important shifts among its various sub-categories. An example is the Chemical and Allied Products industry, which increased its relative contribution to direct investment in Manufacturing by 10 percentage points. The sub-category, Other Manufacturing, increased by 4 percentage points. These changes occurred at the expense of Beverages, down 7%, and Iron and Products, down 6%.

Equity and Control of Direct Investment Abroad[4]

Many of the Canadian companies which have significant subsidiaries, affiliates or branches abroad have a sizeable foreign ownership component themselves. Therefore, "control of Canadian direct investment abroad" is the apportionment of Canadian direct investment according to the control of the investing Canadian enterprise.

This control should not be confused with the total capital at the disposal of Canadian direct investment companies abroad. The total capital is larger than is indicated by the value of Canadian direct investment abroad. Some of the direct investment enterprises abroad may have third party participation through ownership of their debt or stock[5].

In data series on Canada's external assets, Canadian direct investment is shown without regard to the equity held indirectly by non-residents. This is because the total direct investment abroad of Canadian companies is frequently more significant for the Canadian balance of payments than the Canadian equity. For example, it is the total capital movements and the total income transfers arising from these investments which are relevant. The effect on the balance of payments is an important criterion for the inclusion of investments made abroad by Canadian companies.

One of the characteristics of the period 1977-81 was the decline in the proportion of foreign-controlled Canadian direct investment abroad: it fell from 21% to 17%. However, the non-resident equity in Canadian direct investment fell only slightly, from 34% to 33%.

There are important instances where investments made outside Canada by Canadian companies are excluded from the statistics of Canadian investment abroad. This happens when the international transactions are of no real relevance to the Canadian balance of payments or to the Canadian economy generally. The group includes: Canadian investment and holding companies wholly owned abroad whose assets are also wholly situated abroad; the foreign ownership in some Canadian companies operating only abroad in which beneficial Canadian ownership is minor; and some subsidiaries abroad of operating companies wholly owned abroad if the operations abroad are not directly related to the Canadian functions.

Canadian-controlled Investment Abroad[6]

Much more important than direct investment during the 1977-81 period was the total Canadian-controlled long-term investment abroad, that is, direct plus third party investment. In the three-year period 1979 to 1982, the total controlled long-term investment increased two-and-a-half times as much as direct investment.

Direct investment grew by $13.8 billion, to $33.9 billion, whereas the total controlled long-term investment leapt by $34.4 billion, to $67.5 billion. The difference between the stocks of direct and total controlled investment represents third party investments by other residents and non-residents in both equity and debt of Canadian direct investment enterprises abroad. At the end of 1982, such third party investments amounted to $33.7 billion, an increase of $20.6 billion over a three-year period.

As the accompanying statistical statements show, the trend in the industrial distribution of controlled investment abroad is similar to that of direct investment. Globally, the Manufacturing, Real Estate and Petroleum and Natural Gas industries have experienced the greatest growth. In the United States, the Real Estate industry experienced the most growth, followed by the Manufacturing and the Petroleum and Natural Gas industries (see Statements 6 and 7).

Information about the identity of third parties investing in Canadian-controlled enterprises abroad is not available. To what extent such investment originates from Canadian residents, as opposed to foreign residents, is also not known. Some other useful information has not been collected — such as investment guaranteed by the Canadian parent

---

[4] See Appendix A.

[5] The next section of this paper discusses the role of total capital controlled abroad by Canadian companies.

[6] Information about such investment has been collected only since the end of 1979 and is presently available up to the end of 1982. Therefore, all references in this article to Canadian-controlled investment abroad are for the period from the end of 1979 to the end of 1982.

Statement 6. Canadian Direct and Controlled Investment Abroad, Year-ends 1979 to 1982

Year	Direct Investment A	Third Party Investment B	Controlled Investment A & B
		$ millions	
1979	20,027	13,136	33,163
1980	25,803	22,151	47,954
1981	32,537	28,250	60,787
1982	33,865	33,683	67,548

corporations. However, it is reasonable to expect that Canadian financial institutions and their various subsidiaries and branches abroad would be significant third party investors in these enterprises.

What is the significance of such tremendous growth in controlled investment to Canadian direct investment abroad? Such growth leads to a greater leverage of Canadian direct investment. If the investments prove successful, the growth of direct investment abroad will accelerate. If they turn sour, then there will be little or no growth, and perhaps even disinvestment. If the liabilities of foreign subsidiaries to third parties are backed by parental guarantees, we might see large outflows of direct investment capital should conditions give rise to the need to use such guarantees. Such flows would not represent new investments, just the substitution of one form of investment for another. These flows could conceivably occur even in the event of ultimate bankruptcies of some of the subsidiaries abroad.

Developments from 1982 to 1984

Preliminary estimates show that the stock of Canadian direct investment abroad increased at a compounded annual rate of 8% between 1982 and 1984. The lowest rate of growth was in 1982 when the stock grew by only 4%. In the following year, the rate of growth rose slightly to 6%, followed by a respectable growth of 15% in 1984.

In absolute terms, the increase amounted to about $8.8 billion. Capital flows accounted for most of the change — $7.7 billion. Various valuation adjustments — principally the strength of the U.S. dollar and market value/book value adjustments following the sale of certain direct investments in the U.S. — contributed $4.1 billion. But these increases were partially offset by the loss of some $3 billion.

The negative contribution was due largely to substantial losses and write-offs by Canadian direct investment enterprises, especially in the United States, most of which were suffered in 1982. In that year, preliminary estimates show that losses amounted to about $2.5 billion made up as follows: Petroleum and Natural Gas, $1,100 million; Manufacturing, $600 million; Real Estate, $400 million; Mining, $200 million; and all other industries, $200 million.

According to preliminary indications, net losses and write-offs in 1983 amounted to about $750 million. It seems that a turnaround occurred in 1984. However, since the 1983 and 1984 statistics are still incomplete, it is difficult to base any firm conclusions on them.

But the important point is that although the economic recession affected all industries, those hit hardest were the very same industries that were in the vanguard of the unprecedented Canadian direct investment abroad in the 1977-81 period, namely Petroleum and Natural Gas, Manufacturing and Real Estate.

Some large conglomerates invested heavily in the Petroleum and Natural Gas industry — an involvement which has been to some a benefit and to others a regrettable experience. Certain enterprises have withdrawn from this industry and suffered large write-offs and losses. Some conglomerates involved in the Real Estate industry also have had their share of problems. Certain other industries have been troubled in the recent past, but not to the same degree as those in Petroleum and Natural Gas and Real Estate.

However, there are favourable aspects of Canadian investment abroad to consider. The rationalization of the Real Estate Industry must be viewed to appreciate the tenacity and resiliency of some of these players. For instance, some Real Estate enterprises have weathered the storm through financial reorganizations involving their principal creditors. Others have merged, either with financially stronger enterprises in the same industry or with conglomerates. Also, there is now a greater degree of joint venture participation with foreign real estate companies and insurance companies. Added to that is a very favourable intangible factor — the top-class management of some of these Real Estate enterprises. Perhaps more than anything else, the high-calibre management of some of these companies was responsible for rescuing them from bankruptcy.

In retrospect, it could be said that more caution could have been used in the Petroleum industry. The high premiums paid to acquire some assets may have been unwarranted. It should not be forgotten, though, that 1977-81 was a period of OPEC dominance and world prices of petroleum were expected to rise much higher. Assets were valued in terms of replacement costs and regarded as excellent hedges against anticipated high rates of inflation. But the reality turned out to be otherwise and there were some sour developments.

Foreign Manufacturing industries are quite prominent recipients of Canadian direct investment dollars. Investments have been made in some mature and slow growth industries which are affected by the economic cycles, and in others that are largely immune to them. In addition, Canada is well represented in some of the more successful new growth industries. Canada also has an international competitive edge because of its expertise in the manufacture of certain consumer products and communications equipment.

The Financial industry is another field where Canadians are showing more interest abroad. It should be noted that, at present, statistics on direct investment abroad exclude the investments of Canadian chartered banks, which far more than offset their liabilities abroad. If these direct investments by chartered banks were included, the contribution of the financial industry to total investment abroad would be greater than the current data suggest.

Conclusion

In recent years, the issue of Canadian direct investment abroad has attracted a great deal of attention. Over the years 1977 to 1981, such investment grew at an unprecedented rate. Since then, the rate of growth has subsided, but it is still comparatively high.

The Canadian experience was not unique; it was part of a global phenomenon that affected other direct investor countries as well. Furthermore, for all of these countries, including Canada, the increase in capital exports affected not only direct investment but also other types of capital, such as portfolio and short-term investments. The favourite destination for most of these capital exports was the United States.

For various reasons, the United States was attractive to non-residents wanting to make direct, portfolio and short-term investments abroad. The result of these developments was that, by the end of 1980, the United States had displaced Canada as the world's most important host country for foreign direct investment. And although the United States retains its pre-eminence as the home country for direct investors, its relative share of global direct investment has been eroded in recent years.

This paper has focussed on one aspect of Canadian investment abroad in recent years, namely direct investment. Assessing the impact of such investment on the Canadian economy, and on the economies of the host countries, is beyond the scope of this paper. But it should be noted that such an examination would, in any case, be restricted by the statistical data and the limited number of case studies available.

Gross National Product
First Quarter 1985

A comprehensive revision and rebasing of the Income and Expenditure Accounts, going back to 1961, is underway. The current schedule calls for release of these estimates in June, 1986. As a result, the complete revision of the estimates for the 1981-84 period that would customarily be published at this time has not been carried out. Revisions have been limited to the incorporation of the latest estimates of capital spending for 1983 and 1984 and, for all other series, to the incorporation of more current source data and revised seasonal patterns for 1984.

Gross National Product at market prices rose by 2.4% in the first quarter of 1985 to a level of $441.0 billion, seasonally adjusted at annual rates. After allowing for a 1.5% increase in prices, this represented a 0.9% rise in the volume of GNP, following increases of 1.6% and 0.8% in the third and fourth quarters of 1984 respectively.

The principal sources of growth occurred in higher consumer spending on goods and housing and an accumulation of inventories. The upturn of consumer demand followed a drop in interest rates in the second half of 1984 and coincided with unusually large income tax refunds in March. A marginal decline in exported goods largely originated in the United States, despite a recovery of motor vehicle activity there, following strikes in the fourth quarter. Business investment in plant and equipment recorded little change and remains near the trough levels reached in 1983.

In terms of factor incomes, continued moderate growth was evident in both labour income and corporate profits before taxes. Total labour income rose 1.5% in line with the average increase in the past four quarters. Corporate profits increased 1.9% in the first quarter, comparable to the average of the past four quarters. The share of GNP accruing to labour income (54.8%) and corporate profits (9.5%) were virtually unchanged from a year earlier.

Consumer expenditure on goods and services rose 1.1% in volume in the first quarter, as a 1.7% increase for goods outweighed sluggish spending on services (0.3%). The first quarter gain in expenditure on goods was concentrated in spending on automotive goods, clothing, food, and home heating fuels. The weakness in outlays on services was widespread. While the first quarter gain in overall consumer demand was comparable to the average quarterly increase in the past year, the coincidence of large income tax refunds and increased retail sales in March suggest that part of the increase may be irregular in nature.

Real gross fixed capital formation rose 0.9% in total in the first quarter, with virtually all of the gain originating in residential construction. Housing expenditures increased 5.1%, the largest gain since mid-1983. Sharply higher real estate commissions on sales of existing houses, reflecting a second consecutive quarterly gain, outweighed a small decline in new housing construction.

Business investment in plant and equipment was little changed in volume for the fifth consecutive quarter. Higher outlays for machinery and equipment were counter-balanced by lower spending on non-residential construction. Total business investment in plant and equipment has recovered only 2.1% since the trough attained in mid-1983, and, in the first quarter, remained 21% below the pre-recession peak. The nominal level of total outlays for plant and equipment in the first quarter was 2.5% above the average level in 1984, which is broadly consistent with the 8.2% gain in the Public and Private Investment forecast survey results for 1985.

Following a small decumulation in the fourth quarter, non-farm business inventories swung up $1.4 billion to an accumulation of $1.2 billion in the first quarter. Much of the swing occurred in automobile stocks at the retail level, coincident with the sharp increase in passenger car imports. Inventories in the manufacturing sector were little changed, as a reduction in raw materials and in goods-in-process offset a build-up of finished goods.

Real exports of goods and services rose marginally, and the volume of merchandise exports edged down 0.8% in the first quarter. The level of exports was little changed from the level attained in the third quarter of 1984, when exports rose over 7.0%. Most of the flattening-out in export demand over the last two quarters originated in shipments to the United States, with little offset forthcoming from overseas demand. In terms of volume, the first quarter merchandise decline originated in continued weak demand for a number of primary commodities and end products.

Imports of goods and services rose 4.5%, to more than recoup a 1.6% decline in the previous quarter. Nearly all of the first quarter rebound in merchandise imports was in passenger cars. Most of the remaining components of end product imports declined modestly, notably those related to household demand and business investment in machinery and equipment.

The implicit price index for GNE rose by 1.5% in the first quarter, while the year-over-year rate of increase remained stable at about 3.3%. A large part of the increase originated in export prices, which recovered 2.6% after a 2.3% decline in the second half of 1984, largely reflecting weight shifts among the components.

The 1.5% gain in total labour income contributed to a 2.0% increase in total personal incomes. Personal disposable income expanded 3.2%, as personal income taxes declined by 6.6%. The drop in taxes reflected unusually fast processing of income tax refunds, which almost doubled from the level in the first quarter of 1984, with the result that the personal savings rate rose to 14.4%.

Available on CANSIM: matrices 525-527, 1000-1024.

A printout containing all tables is also available on the day of release from the Gross National Product Division ($35/$140).

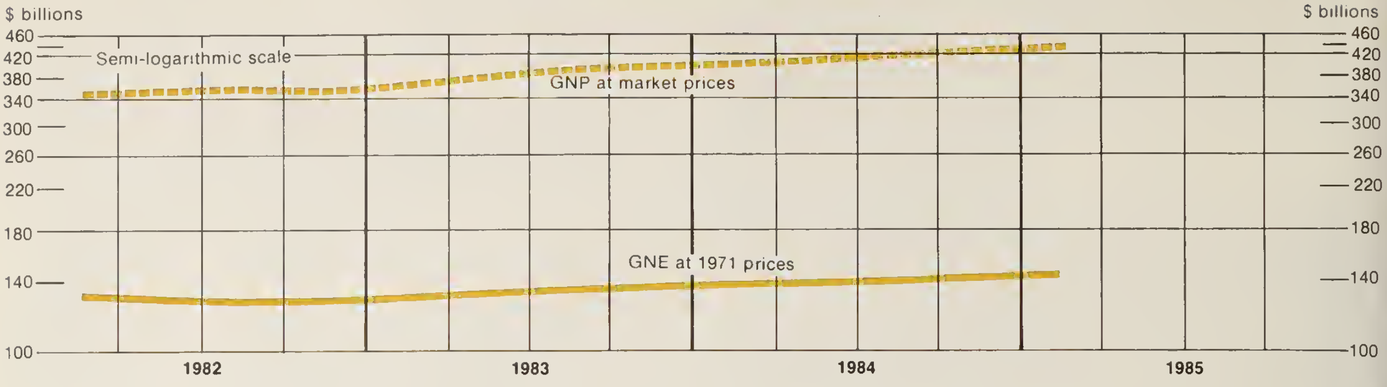
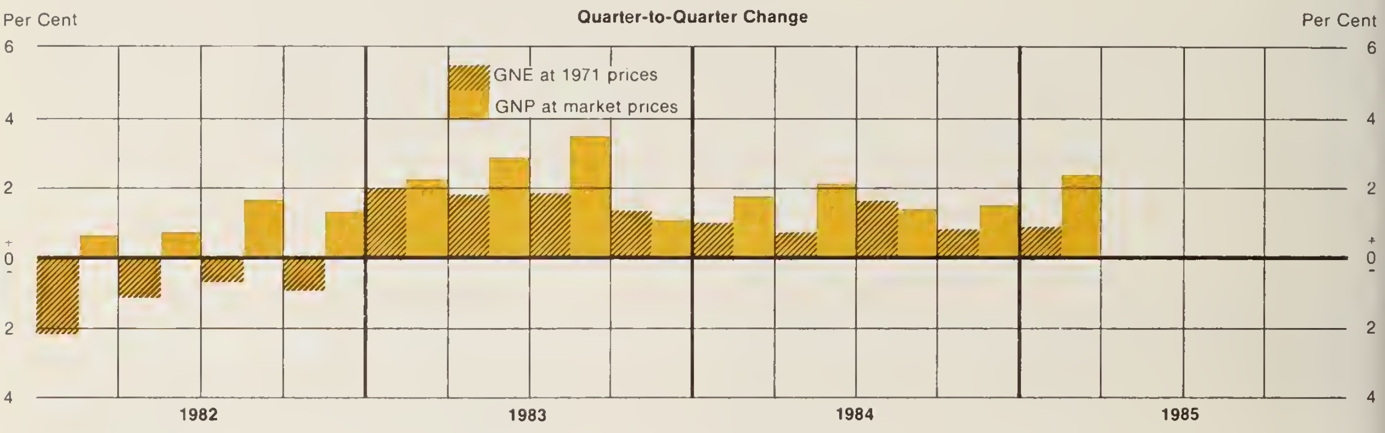
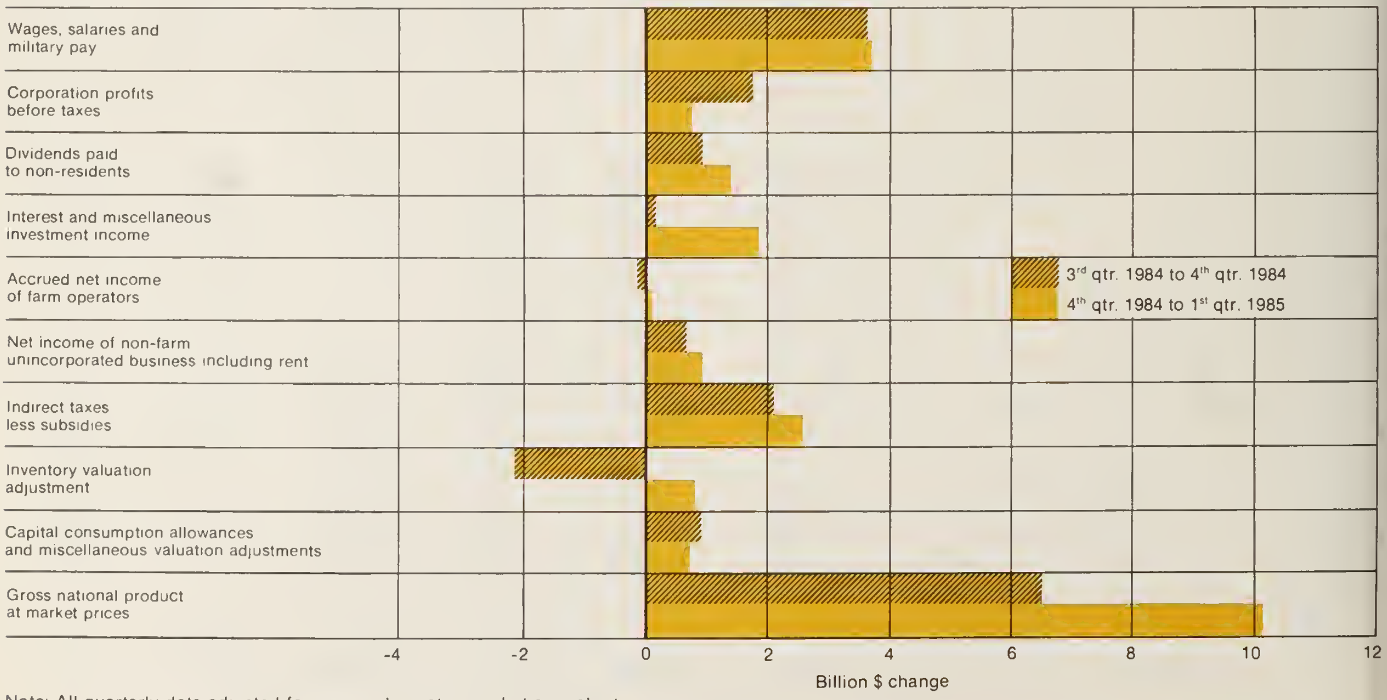
Gross National Product at market prices rose by 2.4% in the first quarter of 1985 to a level of $441.0 billion, seasonally adjusted at annual rates. After allowing for price increases GNP rose 0.9%.





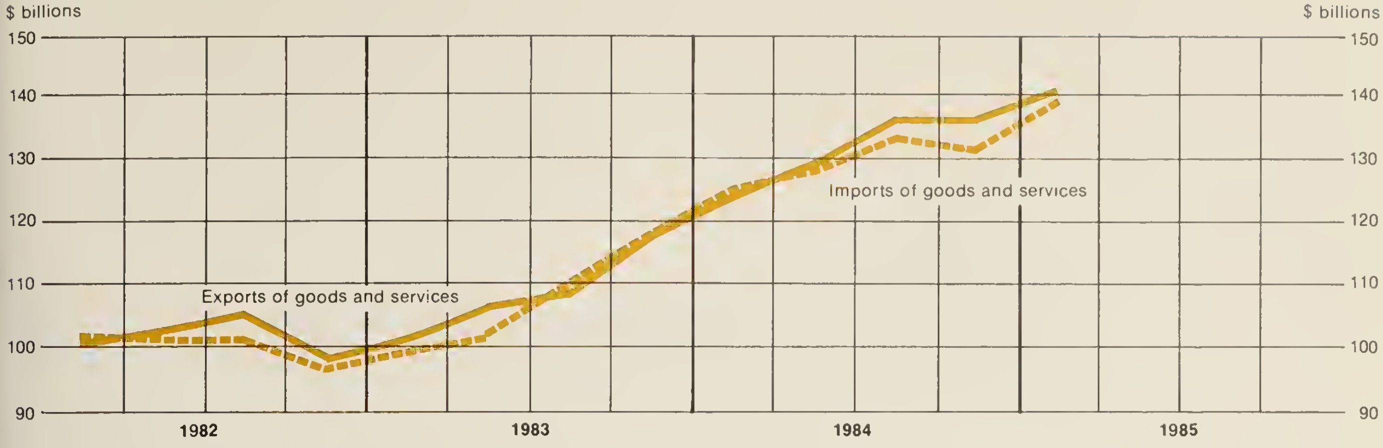
Quarter-to-Quarter Change

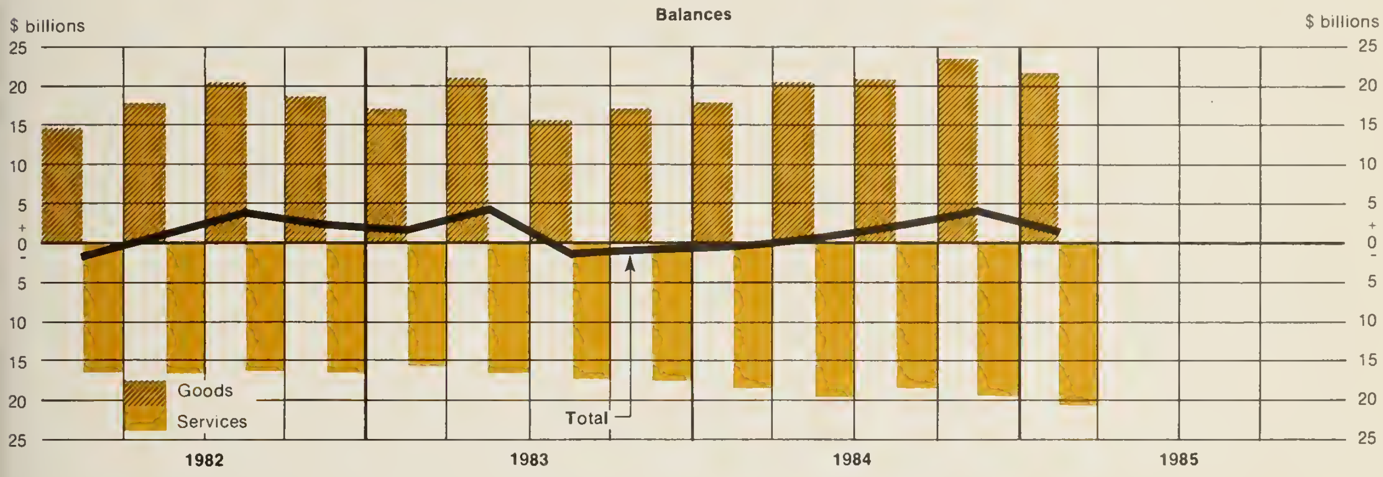
In both the fourth quarter 1984 and first quarter 1985, wages, salaries and supplementary labour income and military pay and allowances advanced by 1.5%. Corporation profits before taxes increased 1.9% and interest and miscellaneous investment income rose 5.6%.



Note: All quarterly data adjusted for seasonal variation and at annual rates

Exports and imports of goods and services rose 3.3% and 5.5% respectively in the first quarter of 1985, following an increase in exports of 2.0% and a decrease in imports of 1.2% in the fourth quarter of 1984. The balance in goods and services reached $1.2 billion, compared to $4.0 billion in the fourth quarter 1984.





Real consumer expenditure on goods and services rose 1.1% while non-farm business inventories swung up $1.4 billion to an accumulation of $1.2 billion in the first quarter 1985. Net exports declined sharply and business capital investment rose moderately.

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I [2] Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3] Includes logging, fishing, trapping and hunting. [4] Includes mechanical and construction. [5] Includes a small number in non-specified occupations. [6] Beginning with 1978 includes fiancés and fiancées. [7] Does not include students entering Canada on students' visas. [8] Includes also retired persons, elderly dependents, and other unspecified persons.

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9.

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

---

[1] "Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months. [3] Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees on courses approved by Canada Employment and Immigration Commission.

---

[1] Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month.
[2] The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3] The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

Source: Research Bulletin, Labour Canada.

[1] These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1982. [2] Includes water, fuel and electricity, and traveller accommodation. [3] Excludes water, fuel and electricity.

• For further information on the weights and methodology associated with the Consumer Price Index, see "The Consumer Price Index Reference Paper, updating based on 1982 expenditures," cat. 62-553, occasional.

[1] Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2] Shipments of goods manufactured within the establishments. [3] Total new orders received during the period at estimated selling value, net of cancellations. [4] Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

[1] Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export.

Sources: Pulpwood and Wood Residue Statistics (25-001), Exports by Commodities (65-004), Statistics Canada; Bulletins of the Canadian Pulp and Paper Association: "Monthly Pulp Summary" and "Monthly Newsprint Statistics".

[1] Data compiled according to the Steel Distribution Index revised January, 1964. [2] Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [3] Excluding shipments for re-processing at maker's own plant. [4] Data compiled as submitted by the steel producers according to the steel industry distribution code.

---

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

[1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste.

---

[1] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [3] Includes stove oil, kerosene. [4] Includes aviation gasoline and aviation turbo fuel. [5] Includes propane and propane mixes and butane and butane mixes. [6] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly

Note: Components may not add to totals due to rounding differences.

[1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and existing commercial structures and farm property.

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision. [2] The major groups include additional components than the selected ones shown.

[1] Total exports includes domestic exports and re-exports, for further information please refer to Summary of External Trade (65-001). [2] The figures reflect a number of adjustments applied to the customs totals to make them consistent with the concepts and definitions used in the system of national accounts. For more information about these adjustments, please refer to Quarterly Estimates of the Canadian Balance of International Payments (67-001). [3] For definition of major trading areas and sections, please refer to Summary of External Trade (65-001).

[1] Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled $500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] These series reflect the combination of two CANSIM series.

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

[1] This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. [2] Seasonally adjusted data for Saskatchewan is not available

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. [4] Includes Petroleum and Gas Revenue tax. [5] Includes special excise tax on gasoline.

Statistics Canada Statistique Canada

Data in Many Forms..

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8200, 990-8203) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montreal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(966-6586)	Vancouver	(666-3691)

Toll free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional references centres.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Main Base Series Directory, 1984 — $75.00 Canada, $90.00 other countries

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

CANSIM Mini Base Series Directory, Catalogue 12-569 — $45.00 Canada, $54.00 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — $7

This index provides a summary of available data or the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — $20

This directory provides a detailed guide to the Cross Classified Data Base. It provides a descriptic of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The stai dard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitiv intra-year variations resulting from normal differences in weather, holidays with invariable dates, o other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjuste series will contain irregular fluctuations. Small changes between months in the adjusted series ma simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted se ries, indicates the smallest span of months for whi the average percent change without regard to sigr in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a movir average of the period equal to the MCD tends to smooth irregular movements which may obscure tl underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

J.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
R.E. Drover — Director, Transportation Division
B.J. Lynch — Director General, Operations Branch
R. Platek — Director, Census and Household Survey Methods Division
J.G. Stinson — Director, CANSIM Operations Division
G.J. Brackstone — Director General, Methodology Branch
A. Meguerditchian — Director, International and Financial Economics Division
L.O. Stone — Director, Population Studies Division
P.N. Triandafillou — Director, Agriculture/Natural Resources Division
K. Lal — Director General, System of National Accounts Branch
D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publication Sales and Services, Statistics Canada, Ottawa, K1A 0T6 and remittances made payable to the Receiver General for Canada.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada. R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

The Small Area Data Program: Focusing on Canada's Diversity

by Mary Fraser *

Since Confederation, Canada's population has multiplied sixfold, and the nation has grown to 10 million square kilometres. Canada is now a modern mosaic of economic, social and demographic contrasts, a complex environment for the operations of both public and private organizations. Data are needed to allow governments to tailor policies and programs to local requirements. There has also been an increase in private sector requirements for subprovincial statistics that will permit informed decisions on site location, marketing and administration.

The Census of Population provides social and economic data for small areas. However, the census is taken only every five years and many organizations require more frequent information that will allow them to track local changes as they occur. In addition, public and private sector researchers, program analysts and administrators have called for easier access to "small area" data, and have identified new data needs to fill key information gaps.

Statistics Canada's Small Area Data Program (SADP) is a national focal point for answering these challenges. Funded in July 1983, the SADP has already made major gains in improving the organization, accessibility and scope of statistics for subprovincial areas. By the end of fiscal year 1985-86, the Program's final developmental year, the SADP will have established a framework to support the future development and provision of small area data.

A Comprehensive, Interdisciplinary Approach

The Small Area Data Program is a comprehensive approach to meeting the requirements of data users. Thus, the SADP involves Statistics Canada specialists from various fields, including electronic data management, communications, geographic systems, administrative data development, and marketing. This team provides an agency-wide focu for identifying existing small area data, supporting data development projects, and investigating new ways to organize and present subprovincial statistics.

As the SADP gathers momentum, its scope is extending beyond Statistics Canada. Program personnel are canvassing small area data users across Canada to determine their requirements. Th SADP is also creating an ever-widening forum for the exchange of ideas, technologies, and, when possible, statistical information, between Statistics Canada and other suppliers of small area data.

Statistics on a Geographic Basis

Organizing the wealth of existing subprovincial dat on a geographic basis is one of the Small Area Da Program's first priorities. Statistics now available include geographically detailed information from th successive Censuses of Population and Censuses Agriculture, and data from the annual Census of Manufactures. Administrative records yield a varie of small area statistics. In addition, various sample

---

* Mary Fraser is a Public Relations Officer in the Communications Division

surveys, such as the Labour Force Survey and the Survey of Employment, Payrolls and Hours, produce monthly or annual information for certain subprovincial areas.

Many users need a wide array of data to probe the complex interrelationships between social, demographic and economic trends at local levels. However, they are usually faced with several major stumbling-blocks.

Most statistics are organized, not for particular geographic areas, but according to subject matter for various, often incompatible, geographic levels. Furthermore, most small area information from Statistics Canada and other data suppliers is scattered over different data bases. Users must spend considerable time and resources identifying and obtaining existing subprovincial data sets on topics of interest. Moreover, bringing these statistics together for a particular geographic area requires considerable knowledge of the diverse concepts and definitions involved. Sometimes, existing small area data information is overlooked, resulting in expensive duplication of data collection efforts.

The Small Area Data Program will also attempt to serve users requiring information organized according to subject matter. However, emphasis is on the packaging and presentation of small area data on a geographic basis. During the past two years, the Program released two products reflecting this approach.

Social, Demographic and Economic Area Profiles

Profiles of all 282 Federal Electoral Districts (FED), eleased in May 1984, drew together a wide array of ocial, economic and demographic data for each FED. These included census statistics, as well as data on manufacturing, the labour force, ransportation and construction, justice and ducation. The tables were accompanied by narrative text, maps, charts and graphs, and a etailed list of sources and notes.

n February 1985, the Small Area Data Program published a reference publication entitled Canada, he Provinces and the Territories: A Statistical Profile. This publication allows quick comparisons between he provinces, the territories and Canada as a whole, on topics that range from economic structure to social institutions and target groups. Although this publication focuses on the provinces, rather than subprovincial areas, its presentation accords with the SADP's emphasis on packaging social, demographic and economic statistics and indicators for particular areas.

Products for 1985-86 Include Conversion File, Data Base

In May 1985, the SADP released the Canada Conversion File, which allows the geographical linkage of postal codes and standard geographical areas such as Census Divisions. The File will help the SADP to generate statistics for user-defined areas from the census and from administrative files, and will greatly increase the potential of records containing addresses with postal codes as a tool for describing small areas. It will also help users interpret or reaggregate statistics, and allow them to define areas for direct mail campaigns.

During the 1985-86 fiscal year, the SADP will also introduce the small area data base. This service will be available through the CANSIM Cross-classified System, allowing users to extract a variety of data in an interactive computing environment. On-line access to the indicators contained in Canada, the Provinces and the Territories, as well as Census of Population and Census of Agriculture data for Census Divisions and Federal Electoral Districts, is already available.

As the SAD-CANSIM-Cross-classified data base develops, the SADP will attempt to fill the needs of users requiring data on user-specified areas. However, the initial focus of the Program is on organizing and disseminating data for the geographic levels of the Standard Geographical Classification (SGC).[*]

By the end of the 1985-86 fiscal year, the new data base will be able to provide users with an array of social, demographic and economic data for Census Divisions, Census Subdivisions, Census Metropolitan Areas[**] and also for Federal Electoral Districts. One-page fact sheets will be produced to illustrate the date available for each area.

---

[*] The Standard Geographical Classification (SGC) provides a standard set of geographic codes for the provinces and territories, census divisions and census subdivisions, aiding the linkage and exchange of data among different files. Census divisions are large subprovincial areas that correspond, when possible, to local administrative areas such as counties, regional districts, regional municipalities. Census divisions are divided into census subdivisions, which also follow administrative boundaries, such as municipal boundaries, when these are present.

[**] A Census Metropolitan Area (CMA) is an urbanized core with a population of 100,000 or more, containing whole census subdivisions.

The SAD-CANSIM-Cross-classified data base will be gradually extended to encompass additional data at different geographical levels. New data from Statistics Canada, and from sources outside the agency, will be entered as soon as they become available.

Like the SADP's other products and services, the data base will evolve in response to user requirements.

The SADP has co-operated with the Statistics Canada Regional Office in Toronto, local federal departments and the Ontario provincial government, to create a prototype for a regional small area data service for microcomputers. This service, called the Federal Ontario Small Area Data Service (FOSADS) has been designed for IBM-PC or compatible systems. As FOSADS develops, the service will be offered to clientele outside the federal government, as well as in other provinces.

Inventory to Aid Data Identification

In the fall of 1985, the SADP will publish the first version of a Small Area Data Inventory, (SADI). This inventory will allow both sophisticated and novice researchers to quickly identify subprovincial data sources for their area of interest.

SADI will provide a reference to Statistics Canada's published small area data, and also to the agency's wide range of unpublished data, subject to confidentiality considerations. Users will be able to identify which data are available for standard geostatistical areas such as Census Divisions, Census Metropolitan Areas and Federal Electoral Districts, and for other areas, including unincorporated places, school districts, police districts and labour force economic regions. Data will also be referenced by major subject matter areas, such as education, manufacturing and the labour force.

Like SADP's data base, the Small Area Data Inventory will evolve in response to user requirements and will be expanded to include new sources. An extended and updated version of SADI is scheduled for publication in March 1986.

Filling Key Information Gaps

Besides organizing small area data on a geographic basis and streamlining its dissemination, the SADP is working to fill small area information gaps identified by major users.

To do this, it is relying primarily on the further development of administrative records and statistical modelling techniques, and the exploitatio of existing surveys.

Administrative records, which provide annual, quarterly and sometimes monthly information, are a particularly rich potential source of new small area statistics. Traditionally, data derived from these records had focused primarily on such domains as education, public finance, imports and exports and vital statistics. But, more recently, administrative records have been used to generate small area information on Canadians, their families and their households, and on business.

Similarly, there have been dramatic advances in th ability to create small area data through statistical modelling techniques, which use existing informatio to produce new statistics on an area of interest. Furthermore, new small area data estimates can sometimes be produced from existing surveys.

Generating new small area data using any of these methods requires months, sometimes years of developmental work. However, all three techniques can produce timely new information with no increase in response burden, while protecting respondent confidentiality.

To speed the availability of key new data sets, the Small Area Data Program has helped divisions throughout Statistics Canada to carry on with existing data development projects and to initiate new ones.

The SADP's Labour Market Data Development Project, for example, is working on various ways t extend Statistics Canada's array of small area labour market measures. Monthly unemployment insurance records have already been used to produce unemployment insurance beneficiaries/population ratios for Census Division and Federal Electoral Districts. The SADP is now probing ways to produce further labour market information, including employment and unemployment measures for Census Divisions, usi administrative records, existing surveys and statistical modelling techniques. It is also looking f ways to generate labour market indicators for user-defined areas.

Improved business statistics for small areas are a urgent priority for many users. The SADP is attempting to develop basic business statistics — wages, salaries and total revenue — by size, clas and industry, for Census Divisions.

Population estimates for subprovincial areas are an important planning tool for all levels of government. They are also required to create key indicators, such as rates or per capita incidence, on such topics as births, health facilities and unemployment. Statistics Canada has already developed techniques to produce annual estimates for Census Divisions and Census Metropolitan Areas. The SADP has extended these initiatives to produce population data by age groupings and sex at the Census Division level for 1983. Further activities will focus on using new sources of data to produce population data for user-specified small areas.

Annual family income data by province and region, derived from Statistics Canada's annual Survey of Consumer Finance, has long been a key indicator of the well-being of Canadians. The SADP is now developing means to provide this information for Census Divisions and other subprovincial areas using administrative records.

A Framework to Answer Future Needs

During the past two years, the SADP team has been working with colleagues throughout Statistics Canada, and with federal, provincial and territorial government departments, to meet today's most important data needs. Yet when the SADP developmental stage ends in March 1986, many important tasks will remain.

Prototypes for products and services will require constant refinement to reflect changing user requirements. New subprovincial information will be needed on topics such as land use, agriculture, commodity flows and housing. In addition, there will be an ever-growing need for information on user-specified areas — administrative or ecological zones, areas in the far North, communities within towns or cities and marketing areas.

More fundamentally, the SADP will continue to provide a focus for examining basic concepts and assumptions associated with small area data. For what areas should data be provided? What data should be available for each of these kinds of areas? In what formats should small area statistics be presented? These questions will be answered through ongoing consultation with data users, and through studies such as the one commissioned in 1984 to examine the feasibility of developing Economic Geographic Regions.

The SADP is a unique resource dedicated to answering some very challenging statistical problems. The open exchange of ideas is essential to maintaining the momentum of its developmental stage. The SADP would thus welcome feedback on its current projects from data users and suppliers, and suggestions for future directions.

Observations

Self-Employment in Canada

While the number of paid workers decreased dramatically during the recession (down 375,000 between 1981 and 1982), the number of self-employed workers actually increased (+27,000). Furthermore, the growth rate for the self-employed exceeded that of paid workers throughout the 1979 to 1984 period. A recently published Research Paper, entitled *Self-Employment in Canada,* contains two articles which examine Labour Force Survey (LFS) data on the self-employed from 1979 to 1984, with particular emphasis on the recessionary and post-recessionary periods.

The first article provides an overview of self-employment between 1979 and 1984, based on annual average data. Definitional and conceptual issues related to the measurement of self-employment are addressed, followed by a review of trends in the number of self-employed over this period.

Statistics Canada's regular series on the self-employed exclude owners of incorporated businesses. For National Accounts and other purposes such individuals are considered to be paid workers, a convention of long standing among statistical agencies throughout the world. However, for studying labour market behaviour, and in terms of using a classification which conforms to the general understanding of what constitutes self-employment, the distinction between incorporated and unincorporated businesses has been set aside in the present analysis, and all working owners of a business have been treated as self-employed. The impact on the estimated level of self-employment is fairly significant, the net result being an increase of 42% in 1984.

The second article comprises a statistical profile of the self-employed worker in 1984, based on industry, age and sex, followed by a description and explanation of the changes that occurred in the size and composition of this group during and after the recession.

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I. [2] Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3] Includes logging, fishing, trapping and hunting. [4] Includes mechanical and construction. [5] Includes a small number in non-specified occupations. [6] Beginning with 1978 includes fiancés and fiancées. [7] Does not include students entering Canada on students' visas. [8] Includes also retired persons, elderly dependents, and other unspecified persons.

Section 3 · System of National Accounts

1. Income and Expenditure Accounts

18 1.1 National Income and Gross National Product
18 1.2 Gross National Expenditure
19 1.3 Gross National Expenditure, Constant Dollars
19 1.4 Sources of Personal Income
20 1.5 Disposition of Personal Income
20 1.6 Sources and Disposition of Gross Saving
21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
25 1.8 Implicit Price Indexes, Gross National Expenditure
25 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

26 2.1 Gross Domestic Product by Industry of Origin, Quarterly
27 2.2 Gross Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

32 3.1 Canadian Balance of International Payments, Current Account, All Countries
33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

1—Income and expenditure accounts

Table 1.1: National income and gross national product (millions of dollars)

---

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

---

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2] Tax liabilities. [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9.

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

[1] "Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months. [3] Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees on courses approved by Canada Employment and Immigration Commission.

[1] Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. [2] The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3] The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

[1] These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1982. [2] Includes water, fuel and electricity, and traveller accommodation. [3] Excludes water, fuel and electricity.

*"For further information on the weights and methodology associated with the Consumer Price Index, see "The Consumer Price Index Reference Paper, updating based on 1982 expenditures," cat. 62-553, occasional.

[1] Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2] Shipments of goods manufactured within the establishments. [3] Total new orders received during the period at estimated selling value, net of cancellations. [4] Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: **Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

Table 2: Manufacturing shipments[1] by industry based on the 1980 standard industrial classification (million dollars)

Year and month	Total shipments	Non-durable goods industries											
		Total	Food	Beverage	Tobacco products	Rubber products	Plastics products	Leather and allied products	Primary textile	Textile products	Clothing	Paper and allied products	Printing publishing and allied

---

[1] Estimates of manufacturers' shipments are based on a monthly survey of a sample of manufacturing establishments benchmarked to the annual Census of Manufactures.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: **Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

Table 3: Manufacturing inventories[1] by industry based on the 1980 standard industrial classification (million dollars)

		Non-durable goods industries											
End of period and month	Total inventories owned	Total	Food	Beverage	Tobacco products	Rubber products	Plastics products	Leather and allied products	Primary textile	Textile products	Clothing	Paper and allied products	Printing publishing and allied

---

eparate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are utually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1

ote. All series are subject to revision each year when more recent Census of Manufactures data become available.

ource: **Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1980 standard industrial classification (million dollars)

	Inventories owned				Inventories held: Total			Inventories held: raw materials						
End of period and month	Consumer goods: Non-durable and semi-durable	Capital goods	Construction materials and components	Supplementary classification: automotive products	Consumer goods: Durable	Intermediate goods and supplies	Export-oriented industries	Consumer goods: Non-durable and semi-durable	Consumer goods: Durable	Capital goods	Construction materials and components	Intermediate goods and supplies	Export-oriented industries	Supplementary classification: automotive products

[1] Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export.

Sources: Pulpwood and Wood Residue Statistics (25-001), Exports by Commodities (65-004), Statistics Canada; Bulletins of the Canadian Pulp and Paper Association: "Monthly Pulp Summary" and "Monthly Newsprint Statistics".

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. [2] Figures on net shipments relate to semi finished and rolled steel products only Shipments to consuming industries of castings, forgings and steel pipe are not included. [3] Excluding shipments for re-processing at maker's own plant. [4] Data compiled as submitted by the steel producers according to the steel industry distribution code.

---

[1] Gas types are included. [2] Includes producers' shipments for export [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other. [6] Excludes apartment type machines. [7] Excludes other than electric.

ote: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.
Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2]Includes crude oil, condensate and pentanes lus. [3]Gross new production by field less field flared and waste.
ources: Crude Petroleum and Natural Gas Production (26-006), Gas Utilities (55-002), Statistics Canada.

[1] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [3] Includes stove oil, kerosene. [4] Includes aviation gasoline and aviation turbo fuel. [5] Includes propane and propane mixes and butane and butane mixes. [6] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

---

dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the sult of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of ,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

te: Components may not add to totals due to rounding differences.

ata are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on half of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4] Includes new and sting commercial structures and farm property.

urce: Canadian Housing Statistics, Central Mortgage and Housing Corporation.

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision. [2] The major groups include additional components than the selected ones shown.

Section 11 · External Trade

1. Merchandise Trade on a Balance of Payments Basis
1.1 Total Exports by Major Trading Area and Section, Seasonally Adjusted, Balance of Payments Basis
1.2 Imports by Major Trading Area and Section, Seasonally Adjusted, Balance of Payments Basis
1.3 Price and Volume Indexes of Total Exports by Section, Seasonally Adjusted, Balance of Payments Basis
1.4 Price and Volume Indexes of Imports by Section, Seasonally Adjusted, Balance of Payments Basis
1.5 Total Exports by Commodity Grouping, Seasonally Adjusted, Balance of Payments Basis
1.6 Imports by Commodity Grouping, Seasonally Adjusted, Balance of Payments Basis
2. Merchandise Trade on a Customs Basis
2.1 Total Exports by Country, Not Seasonally Adjusted, Customs Basis
2.2 Imports by Country, Not Seasonally Adjusted, Customs Basis
2.3 Total Exports by Commodity Grouping, Not Seasonally Adjusted, Customs Basis
2.4 Imports by Commodity Grouping, Not Seasonally Adjusted, Customs Basis

---

[1] Total exports includes domestic exports and re-exports, for further information please refer to Summary of External Trade (65-001). [2] The figures reflect a number of adjustments applied to the customs totals to make them consistent with the concepts and definitions used in the system of national accounts. For more information about these adjustments, please refer to Quarterly Estimates of the Canadian Balance of International Payments (67-001). [3] For definition of major trading areas and sections, please refer to Summary of External Trade (65-001).

[1] Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled $500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] These series reflect the combination of two CANSIM series.

ote: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver eneral are not included in the data.

This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation ot cheques cashed ontinues to reflect what had been the previous centres; however, this comparison may not remain valid through time. [2]Seasonally adjusted data for Saskatchewan is not available.

ource: Cheques Cashed (61-001), Statistics Canada.

---

[1] This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2] Beginning in December 1973, this category includes oil export tax. [3] March includes supplementary payments arising from the closing of the accounts. [4] Includes Petroleum and Gas Revenue tax. [5] Includes special excise tax on gasoline.

Statistics Canada Statistique Canada

Data in Many Forms..

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 990-8200) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Sturgeon Falls	(753-4888)
Halifax	(426-5331)	Winnipeg	(949-4020)
Montreal	(283-5725)	Regina	(359-5405)
Ottawa	(990-8116)	Edmonton	(420-3027)
Toronto	(973-6586)	Vancouver	(666-3691)

Credit card only (973-8018)

Toll free access is provided in all provinces and territories, for users who reside outside the local dialing area of any of the regional references centres.

Newfoundland and Labrador	Zenith 0-7037
Nova Scotia, New Brunswick and Prince Edward Island	1-800-565-7192
Quebec	1-800-361-2831

Canadian Statistical Review

Data in this publication were retrieved from CANSIM† (Official Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Main Base Series Directory, 1984 — $75.00 Canada, $90.00 other countries

The Directory includes an index which serves to identify, at a fairly aggregative level, the contents of the CANSIM database. This index provides a key to the Series Directory and is the first step in locating series from the CANSIM Main Base.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material.

CANSIM Mini Base Series Directory, Catalogue 12-569 — $45.00 Canada, $54.00 other countries

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — $7

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — $20

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used is the Statistics Canada X-11-ARIMA seasonal adjustment method. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:

J.S. Wells (Acting Chairman) — Assistant Chief Statistician, National Accounts and Analytical Services Field
R.E. Drover — Director, Transportation Division
B.J. Lynch — Director General, Operations Branch
R. Platek — Director, Census and Household Survey Methods Division
J.G. Stinson — Director, CANSIM Operations Division
G.J. Brackstone — Director General, Methodology Branch
A. Meguerditchian — Director, International and Financial Economics Division
L.O. Stone — Director, Population Studies Division
P.N. Triandafillou — Director, Agriculture/Natural Resources Division
K. Lal — Director General, System of National Accounts Branch
D. Bergeron — Editor, Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Note to Users

This section is used to announce changes in tables of the *Canadian Statistical Review* and in related CANSIM series.

Section 1 — (page 10) and Section 4 — Table 9 to Section 4 — Table 16: Employment, Earnings and Hours.

Monthly or quarterly data may not add to totals due to rounding.

The annual average figures in the May through July 1985 issues presented incorrect values. The error has been corrected with this issue.

THE NATIONAL BALANCE SHEET AND NATIONAL WEALTH, 1961-1984 *

The National Balance Sheet is an aggregate balance sheet for the Canadian economy, which represents the combination of the balance sheets of the domestic sectors[1]. The National Balance Sheet can be presented on an unconsolidated basis including all tangible and financial assets as well as liabilities and net worth (see Table I) or on a consolidated basis (i.e., financial assets and liabilities cancel out) where National Wealth is adjusted for net foreign indebtedness to yield Net National Wealth (see Table II).

At the end of 1984, National Assets (in current dollars)[2] were $3673.4 billion, 8.7 times Gross National Product (GNP). This includes all tangible assets or National Wealth (fixed capital stock, inventories, housing, consumer durables and land), of $1724.7 billion, as well as financial assets amounting to $1948.8 billion. These National Assets should be balanced against total liabilities of $2107.0 billion and the resulting National Net Worth of $1566.5 billion. In 1961, National Assets totalled $297.9 billion or 7.5 times GNP. Total liabilities at that time amounted to $170.0 billion. The compound annual growth rate of National Assets, 1961-1984, was 11.5%, while that of GNP was 7.9%.

Most of the general trends in the National Balance Sheet are apparent from a translation of the data to percentage terms (see Table III). The shifts in the composition of total domestically-held financial assets and domestically-issued liabilities indicate the changing preferences of the saving units and the deficit units as well as the changing nature of, and various innovations in, the financial industry over the period. The altered structure of National Wealth also reflects changes in the decision-making transactors in the economy. The long term trends in the National Balance Sheet and in National Wealth should be interpreted in the light of real economic activity and interest rates combined with inflation over the period 1961 to 1984 (see Chart 1).

---

(1) The National Balance Sheet can be viewed as a summation of the twelve domestic sectors and the associated twenty-eight subsectors of the economy as used in the Financial Flow Accounts. It can also be seen as a combination of the more aggregated three domestic sectors defined in the National Income and Expenditure Accounts — persons and unincorporated business, private and government business enterprises and governments.

(2) All data referred to is in current dollars, unless otherwise stated.

(*) Enquiries regarding this article should be addressed to Patrick O'Hagan, International and Financial Economics Division, Statistics Canada.

---

(1) The National Balance Sheet (NBS) is an aggregate balance sheet for the economy and is the combination of all domestic sectors balance sheets. NBS excludes assets, liabilities and net worth of the Rest of the World sector. Total assets (financial assets plus tangible assets) less liabilities equal net worth. This net worth, in turn, is equal to the sum of all domestic sectors' net worths.

(2) The Consolidated National Balance Sheet (CNBS) is the National Wealth Statement. Total domestic liabilities are netted against total domestically-held financial assets which leaves the Balance of International Indebtedness as a net liability. The Balance of International Indebtedness is subtracted from total tangible assets, or National Wealth, to derive Net National Wealth or National Net Worth. This National Net Worth is equal to the sum of all domestic sectors' net worths, as in (1) above.

On the National Balance Sheet, category 2000 is the Balance of International ebtedness with the sign reversed. On the consolidated National Balance Sheet egory 3100 is the Balance of International Indebtedness.

The total of 3512 plus 3520 is equal to the total of 2512 plus 2520, since shares y also be included in 2512 by the asset holder.

Category 3520, the share liability, includes shares outstanding plus cummulated retained earnings which is equivalent to equity on a historical cost basis. Part of category 3513 also represents this concept of equity

(6) Equal to total assets (1500 + 2100 = 1000) less liabilities (3100) in all sectors. This concept of net worth treats corporate sector equity (shares outstanding plus retained earnings on a historical cost basis) as a liability to other (ultimate) sectors (i.e persons and unincorporated business governments and the rest of the world).

(1) Components may not balance due to rounding.

National Wealth (excluding land)[3] grew steadily over the period 1961 to 1984 (see Chart 2). This neasure of National Wealth was 11.3 times larger in 1984 than its level at the end of 1961. The ronounced effect of inflation in the seventies is vident from a comparison of the diverging trends in urrent dollar and constant dollar National Wealth. The compound annual growth rate of National Vealth, 1961-1984, in current dollars was 11.1%, vhile in constant dollars it was 6.7%.

he annual rate of change of National Wealth xhibits pronounced movements with much the ame pattern as the annual rate of change in urrent dollar GNP. When we consider the year over year change in National Net Worth instead of National Wealth, the pattern is largely similar, with the major deviations occurring with variations in the growth rate of the Balance of International Indebtedness (see Chart 3).

The annual rate of change of National Wealth in constant dollars exhibits a strikingly different pattern, where the trend appears to be downward, concentrated in the latter 1970s (see Chart 4). There also appears to be an explicit cyclical nature to the data, with declines in the recessions and in the 1967 and 1970 slowdowns that were both marked by drops in the rate of capital accumulation[4].

) As a measure of economic growth reproducible tangible ssets, which excludes land, is more relevant than total wealth. Inless otherwise specified, this is the definition of wealth used

A breakdown of National Wealth in constant dollars by type of tangible asset reveals which components are the major contributors to this negative trend in the aggregate series (see Charts 5 and 6). The annual growth rate of all of the series loosely reflect the business cycle.

The structure of National Wealth has changed from 1961 to 1984 (see Chart 7). Fixed capital stock has grown as a proportion of National Wealth from 56.4% to 63.7% over the period under analysis, although it did lose some ground to the housing stock from 1971 to 1976. Inventories share in National Wealth declined sharply, from 10.8% in 1961 to 6.3% in 1984. The ratio of housing stock to National Wealth rose from 21.9% in 1961 to a peak of 24.7% in 1978, only to fall to 20.2% in 1984. The consumer durables to National Wealth ratio has fluctuated over the past twenty-four years, but the overall trend seems downward. Consumer durables began the period at 11.0% and ended th period at 9.8% of National Wealth, although most this decline was concentrated in 1981-84.

When a broader measure of National Wealth is examined to include land as a component, the trends discussed in the above two paragraphs are largely unaffected. Land's relative value has grown only from 14.0% to 18.1% of a broader measure National Wealth.

Various asset-output ratios can be calculated from the National Balance Sheet (see Chart 8). Capital-output ratios show the quantity of physical capital required to obtain a given quantity of output and, as such, provide a crude measure of capital intensity, or, its inverse, the productivity of capital. The capital-output ratio, which includes only fixed capital stock in the numerator, has grown from 1961 to 1984. A broader measure, which includes

l reproducible tangible assets in the numerator, ıllowed much the same pattern over the period.

he financial interrelations ratio (the ratio of ıancial assets to tangible assets, including land) is ı indicator of the financial superstructure of the conomy (Goldsmith, 1969). The long-term trend in ıe ratio appears to be upward but it is interrupted y a large decline in 1974-77 (see Chart 9). This as a period when the "real" return (i.e., after djusting for inflation) on financial assets was egligible or negative due to inflation which appears to have given rise to, and amplified, an accumulation of tangible assets (see Charts 1 and 3).

Liabilities[5] can be placed in relative terms by the ratio of liabilities to GNP and the ratio of the Balance of International Indebtedness to GNP (see Chart 10). Total liabilities as a proportion of tangible assets indicates the level of liabilities associated with, or that have financed, a particular level of National Wealth in the economy (see Chart 11). The ratio of the Balance of International

---

On the National Balance Sheet, corporate equities are ated as liabilities since they constitute financial assets to other ctors and they are part of the Nation's liabilities abroad. These ırporate equities are thus included in the ratios of the Balance International Indebtedness to GNP and to National Wealth. They are excluded, however, in the ratios of liabilities to GNP and to National Wealth. The ratio of the debt of non-financial sectors to GNP exhibits a similar trend (but with more pronounced variation) as the ratio of total liabilities to GNP.

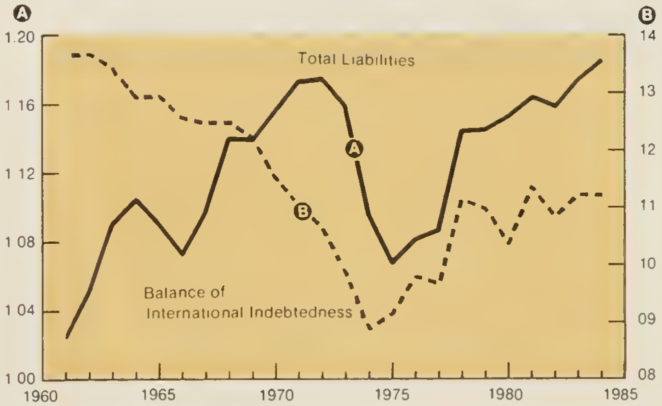
Chart — 11
Liabilities to National Wealth Ratios



Indebtedness to tangible assets is an indicator of the importance of the external sector in the generation of domestic National Wealth or, viewed differently, it is the proportional claim of the rest of the world on domestic National Wealth (see Chart 11).

Some interesting structural changes have taken place in the financial claims on the National Balance Sheet from 1961 to 1984. Marketable debt (Treasury bills, short-term paper and bonds), as a proportion of total liabilities, has declined from 23.4% in 1961 to 16.0% in 1981 and recovered to 20.6% in 1984. The proportion of long-term debt (mortgages, bonds and corporate claims) to total liabilities also exhibits a declining trend over the twenty-two year period, falling from 33.6% in 1961 to 27.7% in 1981, but rising to 28.8% in 1984. These two developments result from the pronounced relative drop in the bonds component, and are in line with increased reliance on bank and other loans as well as inter-corporate loans over the period. The relative increase in bank and other loans, mortgages and consumer credit coupled with the rise in currency and deposits, reflects the growth of financial intermediaries over the whole of the period. There has been a shift in the composition of long-term marketable debt as well. The trend in corporate bonds as a proportion of total bonds rose up to 1973 and declined thereafter. This is in line with the downward trends in marketable and long-term debt, but also reflects in part the growth in government borrowing from the mid-1970s.

In summary, the National Balance Sheet reveals some specific structural changes in both the real side and financial side of the economy. The years 1961 to 1984 have witnessed a slowdown in the growth of National Wealth in constant dollars reflecting the secular trend to slower growth in GNE. As well, there has been a slowing in the growth of National Wealth in current dollars in the period 1975 to 1984. There have been noticeable shifts in the composition of National Wealth, reflecting both economic influences and demographic trends. There has been a long-term trend towards increased debt and decreased liquidity on the National Balance Sheet. From 1961 to 1974 there was decreased relative financial dependence on the rest of the world, but this trend has reversed since 1975 as Canadian made increased recourse to non-resident capital markets.

For the detailed statistical tables (covering all sectors and subsectors of the economy), as well as an overview of the concepts, data sources and methodology, the reader is referred to the National Balance Sheet Accounts, 1961-1984 (catalogue 13-214, annual) released June 1985.

---

[1] In general the term filtering refers to removing, or filtering out, movements of the data that repeat themselves with roughly the same frequency. [2] Composite Index of Housing Starts (units), Building Permits (dollars), and Mortgage Loan Approvals (number). [3] Deflated by the Consumer Price Index. [4] Toronto Stock Exchange (300 Stock Index excluding oil and gas component).

Section 2 · Population Statistics

14 1. Population by Province
14 2. Immigration to Canada, by Country of Last Permanent Residence
15 3. Immigration to Canada, by Province of (Intended) Destination
15 4. Immigration to Canada, by (Intended) Occupational Group
16 5. Births, by Province
16 6. Deaths, by Province
16 7. Marriages, by Province

---

[1] The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1971 Census; see Occupational Classification Manual, Census of Canada, 1971, Catalogue Number 12-536E, Vol. I.

[2] Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base.

[3] Includes logging, fishing, trapping and hunting.

[4] Includes mechanical and construction.

[5] Includes a small number in non-specified occupations.

[6] Beginning with 1978 includes fiancés and fiancées.

[7] Does not include students entering Canada on students' visas.

[8] Includes also retired persons, elderly dependents, and other unspecified persons.

[1] Excludes profits (net of losses) of government business enterprises. [2] Includes the withholding tax applicable to this item. [3] Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4] Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5] Includes net income of independent professional practitioners. [6] See footnote 4, Table 1.2.

[1] Includes defence expenditures. [2] Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3] Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4] The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5] See footnote 4, Table 1.1.

---

[1] The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

---

[1] Includes the taxes on life insurance companies introduced in 1969 At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance [2] Tax liabilities [3] Withholding taxes. [4] The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9.

---

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

---

[1] The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2] The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

---

[1] "Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2] Annual figures are averages of 12 months [3] Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4] Trainees on courses approved by Canada Employment and Immigration Commission

---

[1] Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included Data is published 45 days after the end of reference month. [2] The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3] The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4] The total includes all work stoppages. The agriculture finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. [5] Includes publishing and allied industries. [6] Includes storage and communication industries.

Source: Research Bulletin, Labour Canada.

---

[1] These weights, provided as a general guide, show the relative importance of the major components of the C P.I. They are based on expenditure values derived from quantities and prices of year 1982. [2] Includes water, fuel and electricity, and traveller accommodation. [3] Excludes water, fuel and electricity.

* "For further information on the weights and methodology associated with the Consumer Price Index, see "The Consumer Price Index Reference Paper, updating based on 1982 expenditures," cat. 62-553, occasional.

---

[1] Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2] Shipments of goods manufactured within the establishments [3] Total new orders received during the period at estimated selling value, net of cancellations. [4] Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note. All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: **Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.**

Table 2: Manufacturing shipments[1] by industry based on the 1980 standard industrial classification (million dollars)

Year and month	Total shipments	Non-durable goods industries											
		Total	Food	Beverage	Tobacco products	Rubber products	Plastics products	Leather and allied products	Primary textile	Textile products	Clothing	Paper and allied products	Printing publishing and allied

[1] Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2] Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3] Customs exports. [4] Mill shipments destined for export.

Sources: **Pulpwood and Wood Residue Statistics (25-001), Exports by Commodities (65-004), Statistics Canada; Bulletins of the Canadian Pulp and Paper Association: "Monthly Pulp Summary" and "Monthly Newsprint Statistics".**

---

[1] Data compiled according to the Steel Distribution Index revised January, 1964. [2] Figures on net shipments relate to semi finished and rolled steel products only Shipments to consuming industries of castings, forgings and steel pipe are not included. [3] Excluding shipments for re-processing at maker's own plant. [4] Data compiled as submitted by the steel producers according to the steel industry distribution code.

[1] Gas types are included. [2] Includes producers' shipments for export. [3] In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4] End of period. [5] Electric and other [6] Excludes apartment type machines. [7] Excludes other than electric.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.

[1] Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2] Includes crude oil, condensate and pentanes plus. [3] Gross new production by field less field flared and waste.

[1] Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2] Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [3] Includes stove oil, kerosene. [4] Includes aviation gasoline and aviation turbo fuel. [5] Includes propane and propane mixes and butane and butane mixes. [6] Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

---

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Source: Housing Starts and Completions (64-002), Statistics Canada.

Note: Components may not add to totals due to rounding differences.

[1] Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2] Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3] Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks [4] Includes new and existing commercial structures and farm property.

[1] Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of input. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. The price indexes for the last two years are subject to revision. [2] The major groups include additional components than the selected ones shown.

[1] Total exports includes domestic exports and re-exports, for further information please refer to Summary of External Trade (65-001). [2] The figures reflect a number of adjustments applied to the customs totals to make them consistent with the concepts and definitions used in the system of national accounts. For more information about these adjustments, please refer to Quarterly Estimates of the Canadian Balance of International Payments (67-001). [3] For definition of major trading areas and sections, please refer to Summary of External Trade (65-001).

[1] Data for 1970 through 1972 refer to class 1 and 2 carriers whose gross annual revenues totalled $500,000 or more. Information for the period January 1973-December 1978 refers to only 6 major railways. Commencing January 1979, data for 7 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

---

[1] Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2] Daily averages for period. [3] Mainly deposits of foreign banks. [4] Capital, rest fund and undivided profits as at the latest fiscal year-end. [5] Including issues payable in foreign currency. [6] Excluding Canadian day-to-day loans. [7] Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8] Loans to finance purchase of Canada Savings Bonds at time of issue. [9] These series reflect the combination of two CANSIM series

Note. Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data

[1] This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. [2] Seasonally adjusted data for Saskatchewan is not available
